Your hair, *under the microscope.*

A Regenix hair specialist examines your hair samples to identify what may be affecting your hair and scalp, so your care can be personalized to you.

Within **7 days** of receiving your samples, we'll send you a detailed letter explaining anything we identified, along with microphotographs of your hair.*

Response times may vary during busy periods. If you haven't received your results, please check your spam folder first, then contact us.

*The number of microphotographs depends on the number of usable hair samples received.

FREE HAIR MICROANALYSIS

Downloaded this form from our website? You can mail it in for a **free Hair Microanalysis**, no Starter Kit purchase required.

01
Fill out the questionnaire
Complete pages 2–3. Please print clearly so we can read every answer.

02
Collect your hair samples
Follow the steps below and attach your samples to the Hair Sample Chart on page 4.

03
Mail everything to us
Send the completed pages with your samples attached to the address below.

Collecting your hair samples

1. Find an area on your scalp that matches one of the circles on the Hair Sample Chart.
2. Grasp a small tuft of hair close to the scalp between your thumb and middle finger.
3. Gently squeeze the hairs while pulling upward. A few loose hairs should release.
   - For a thorough analysis, collect **2–3 hairs from each area** on the chart.
   - The **bulb must be visible**: a small white ball at the end of the hair that came from the scalp.
4. Tape each sample to its matching circle on the chart. **Do not place tape over the bulb.**
5. Mail the completed form and chart to Regenix.

Before you start

- **Collect samples right before you shower.** Since you haven't shampooed for a while, loose hairs will come out more easily.
- **Don't pluck hairs with tweezers.** Only loose hairs give an accurate analysis.
- Keep the bulb end of each hair uncovered by tape.
